

Functional & Performance Testing Template

Model Performance Test

Date	28 June 2026
Team ID	
Project Name	Rising Waters – AI Flood Prediction System
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Flood Prediction Accuracy	Enter valid rainfall, river level and weather data	Valid inputs accepted, errors for invalid inputs	Prediction generated successfully	Pass
FT-02	Invalid Input Validation	Enter missing or invalid values	Accepts valid values, shows error for out-of-range	Validation worked correctly	Pass
FT-03	Flood Alert Generation	Input high-risk flood conditions	Correct content is generated based on input	Alert generated successfully	Pass
FT-04	Weather API Connection	Fetch live weather information	API responds successfully	Data received correctly	Pass
PT-01	Prediction Response Time	Submit prediction request	Should be under 3 seconds	2.1 seconds	Pass
PT-02	Multiple User Requests	Simulate multiple users	API should not slow down	Stable performance	Pass
PT-03	Large Dataset Processing	Upload large historical dataset	Should work smoothly without crashing	Successfully processed	Pass
